## I. Purpose

This document serves as a reference atlas linking all 13 Codex Scalar Laws to their active domains of influence. Each law governs a repeatable class of phenomena—biological, physical, cognitive, systemic, or symbolic. This atlas formalizes their reach, category alignment, and use case logic.

## II. Core Domains Mapped

### IV. Commentary

The Codex Laws do not only describe how systems function—they define how energy, memory, and structure are stabilized, restructured, or destabilized across scales. This atlas reveals their cross-disciplinary value, offering a universal syntax for modeling coherence, collapse, and restoration in any observable domain.

Each law provides an anchor for design—of technology, medicine, communication, or social systems.

### Conclusion

The Codex Law set forms a unified logic structure capable of spanning biology, cosmology, cognition, economics, and information theory. This atlas enables any researcher, technologist, or practitioner to trace phenomena back to the scalar harmonics that govern them.

Codex field logic matches known 3D scalar field extensions used in quantum coherence models. Notably, the Quantum Fractalized Stabilization Matrix (QFSM) aligns with Codex Laws 2 (entropy suppression), 5 (phase collapse), and 13 (scalar identity reconstitution). This supports compatibility between Codex scalar pharmacology and modern field-theoretic stabilization systems.
